Title: Software Project: ABACUS Submitted by: Marc Schwarz ABACUS (Annual Backwards and Forwards All Clockwise Study) is a technique developed by the anthropologist Alfred Bester. ABACUS is a way to achieve a deeper understanding of reality. The technique focuses on the fact that everything is going backwards and forwards all the time. ABACUS is used to give new insight on old and unknown phenomena. These phenomena can be observable, tangible, or they can only be perceived via our senses. ABACUS has a magical quality because you're viewing reality from a different angle. It's like looking at a landscape that you've never seen before, and suddenly you see a picture in your mind. The technique consists of four phases. These phases are intended to be a guideline. This is a rough overview of what is meant by

ABACUS. * ABACUS phase 1 - To change the view.
* ABACUS phase 2 - To evaluate the change. *
ABACUS phase 3 - To make a choice and finally *
ABACUS phase 4 - To take action. Procedure -
ABACUS phases 1 to 3 can be done at any time and in
any way. - ABACUS phase 4 must be done every day.
- You must document the progress of ABACUS. How
to use ABACUS - Do not judge the usefulness of
ABACUS. It doesn't have a purpose. - Use ABACUS
when you need to understand a phenomenon that
cannot be explained in other ways. - ABACUS helps
you understand reality, because you learn to let go of
what you think you know. - Be open-minded and try
new things when using ABACUS. - Don't use
ABACUS when you're already sure of yourself. - Do
ABACUS every day. - A person using ABACUS is like
a magician. Requirements - A notebook and pen. - A
friend or family member to talk to. - A copy of
ABACUS phase

The AUCH (AUdio-CHecker) is designed for visualisation of sound. Its focus is on the undifferentiated auditory experience of music and speech. The application simulates a reflective surface that vibrates with the music and speech in the room. The sound reaches this surface and is reflected back. With every vibration the surface reflects it and produces a geometric pattern. The size of this pattern (its period) changes with the amplitude (volume) of the sound and the frequency of the sound. Different amplitude and frequencies change the form of the pattern, and all patterns move like waves across the surface. The shapes of the patterns are constantly changing and the sound surface is deformed. The deformation of the surface generates continuous flow of light. The viewer has to keep the light at the same distance from the surface to see the shape of the pattern. The movement of the shapes produces a continuous image of the music or speech. The images are intended to be experienced in the round, thus all images change continuously and as the viewer moves

the visual effects also move. With AUCH the overall impression of the room is greatly influenced by the music and speech. The shape of the sound surface is influenced by the frequency of the sound. As the higher the frequency the smoother the surface will be. Tapping your finger on the body of the AUCH will cause the 'Bass Wave' to move. This is a technique used to remove much of the vibrating surface, but still leave its reflection. The AUCH is a design; every person can create his or her own version. The vision behind AUCH is to experience music and speech with the mind in an entirely new way. The AUCH is based on the principle that shapes of sounds change and are different for every sound. Sounds can be separated into their basic components to see how these components change the form of the sound. For example, the component of human voice and piano can be separated to see how the component of a human voice is transformed into sound of a piano. We hope that the sound and light together will have an even stronger effect on the mind than each single tool would have. The effect of the AUCH is stronger if you move around the room. If you keep a constant distance from

the surface, the effect is reduced. You can experience AUCH by yourself, by playing music for yourself. This is the best way to understand what the AUCH is about. The AUCH is designed for this purpose. The AU
