AutoCAD

Starting with AutoCAD 2015, the client-server architecture has been improved by the addition of AutoLISP and Visual LISP. The AutoCAD 2016 technology preview includes both a new version of Visual LISP and a new API called the Autodesk Unified Design System (UDS) API. The UDS API allows designers to build applications using a standard, industry-agnostic language. The Language Definition Guide (LDE) defines the guidelines that designers should follow when developing AutoCAD UDS applications. The corruption scandal in Brazil that revolves around Petrobras, the state-controlled oil giant, came to a sudden end this week with the arrest of several top politicians and executives from the company. Meanwhile, the company itself has been sold and is undergoing a large-scale restructuring as it takes on the world's largest oil company, ExxonMobil. What's going on? Key Takeaways The arrest of 12 Petrobras employees Thursday includes a former CEO, a former finance chief and the president of the company's refining and marketing unit. The scandal has already cost the company billions of dollars in losses, and has created an opening for a new industry leader in the region, according to Reuters. The board of directors from Petrobras was also recently replaced, and there are accusations of a pay-to-play scheme to ensure companies would bid for Petrobras contracts. Meanwhile, the company itself has been sold and is undergoing a large-scale restructuring as it takes on the world's largest oil company, ExxonMobil. What's going on? The corruption investigation, dubbed "Operation Car Wash," has cost the company billions of dollars in losses, according to Reuters. Since the investigation began in 2014, Petrobras has lost an estimated \$4 billion. The top executive at the company, CEO Maria das Graças Faria, was arrested on the same day that 11 other employees were arrested for allegedly taking more than \$1 billion from the company a1d647c40b

The move was meant to force a change in the actions of Iran, but many argue that it won't accomplish that goal. The U.S. decision has sent Iran's currency plummeting in value, led to a rise in Iranian citizens' demonstrations, and led to unrest in other countries that had worked with the U.S. on the nuclear deal. Here are the top five reasons to question Trump's decision: 1. The Iran Deal Helped Turn Iran's Foreign Policy Into a Nuclear Capability When President Barack Obama gave the deal to Iran, it was the first deal between the U.S. and a country that was developing a nuclear capability. Trump's decision has helped Iran develop nuclear capability faster than they otherwise would have. Nuclear analyst Laura Rozen of The Washington Post wrote a column in August where she explained the impact the deal has had on Iran's capacity to develop nuclear weapons. "The deal gave Iran access to a large amount of money with which to build its own nuclear capability. The cash in the Joint Plan of Action allowed Iran to increase uranium enrichment and expand centrifuge production," she wrote. Nuclear proliferation expert Mike Spriek of the Heritage Foundation wrote in a blog post on Aug. 10 that the deal gave Iran money to invest in its nuclear facilities and expand its nuclear capability. 2. By Pulling Out of the Deal, Trump Is Risking War President Donald Trump is willing to risk war to get what he wants. Even his most ardent supporters acknowledge this. When he campaigned in 2016, Trump suggested that he would withdraw from the Iran deal if he was elected president. He also said he would let Iran keep its nuclear capabilities. On his first day in office, Trump immediately declared the deal unconstitutional. The move, which is expected to face legal challenge,
