This article is an overview of the main features of the current 2018 release of AutoCAD. Other versions are available; we have chosen the 2018 release to keep things simple and cover the main features. If you need to know what AutoCAD LT is, see this article, which also has a link to AutoCAD LT Tips. The types of projects that AutoCAD is best suited for are architectural and mechanical. It is mainly a 2D drafting application; however, it has a powerful 3D modeling and rendering capabilities. The design environment has been improved over the years. If you need more information about AutoCAD LT, you can read this article. Installing AutoCAD If you need to install AutoCAD yourself, it is very simple. We will show you how to download and install AutoCAD on a Windows-based computer, but you can also download the standalone installer for Mac OS X and Linux. Downloading AutoCAD If you have previously downloaded or purchased AutoCAD, you can obtain the latest version from the AutoCAD Downloads page. You can also obtain the latest version from Autodesk.com. You can also access the downloads page from the Autodesk Subscription or Autodesk Academic Subscription. This isn't a homework question. I'm reading about hash functions and I've seen a lot of examples where the hash function produces a hash value for a given string. The problem I'm having is, in the examples I've seen, they return the hash value for the original string without applying a function to it. What if I want to apply a function to the original string? In the same way, I'm sure I've seen a hash that is not a prime number. How do I make a hash function that produces the result (in my case, the hash value) of the function applied to the original string? A: Just use the String#hash method to do that. It has a parameter which is a block of code that will be called to compute the hash. This block of code can modify the original string. See the documentation: Note: It is best practice to hash the empty string separately. Otherwise, a hash function which has a prime modulus may divide by zero when it is called, yielding a hash of zero for the empty string. This is particularly bad for MD5. irb> "".hash => 2 irb> "a".hash => 6 irb> "ab".hash => 4 irb> {'a' => 'b'}.hash => a1d647c40b

View all feedback in one place, even if you used multiple apps for the same job. If you used another CAD app to do a section on your sheet, attach that section to the assembly sheet, and set the section to a specific view. After that, you can attach it to a drawing and see the drawing sheet's design changes immediately. (video: 2:35 min.) Use drawing views to manage every area of your sheet: annotate a section for feedback, highlight or change a section's annotation for future reference, and even add individual annotations to any area in the drawing sheet. (video: 5:25 min.) Get feedback from 2D and 3D drawings. Create feedback that stays in sync with your drawings, whether you're working in 2D or 3D, and create annotations, reviews, and schedules that stay up to date across all your drawings. (video: 3:50 min.) Manage and modify shared drawing components. Import and export file formats, including AutoCAD.DWG and DWF. The Shared Components Manager includes functionality to review, modify, and export shared drawing components. (video: 2:55 min.) Design the edges and work planes of a 3D sheet: Smooth, evaluate, and modify the sheet's edges and work planes. Visualize the sheet's edges for quick review, align work planes to fit into a space, and position, modify, and constrain work planes in 3D. (video: 2:30 min.) Dynamic Offset: Create dynamic offsets from viewports. In AutoCAD 2023, you can create offsets from viewports, keeping offset lines aligned with page edges. This makes it easier to add text to drawings and elements to sections. (video: 1:18 min.) Display multiple dynamic offset values at once, even if they don't appear on your current sheet. You can display a larger dynamic offset from one viewport, and a smaller dynamic offset from another viewport. If you don't see the value you want, press Ctrl+D to display it. (video: 2:05 min.) Set a dynamic offset for a drawing, keep it for a future sheet, and even reuse the offset value from a previous sheet. In this way, you can simplify setting up and maintaining dynamic offsets. The Dynamic Offset Manager enables you to set offsets that you can reuse on
