In 1991, AutoCAD Product Key became available as a desktop publishing application. The software can integrate with other CAD software packages to generate technical or building plans, in addition to offering standard drafting capabilities. AutoCAD is the world's leading 2D CAD software package, with over 12 million users. AutoCAD LT is a simplified, more affordable version. In 2010, AutoCAD LT was discontinued, and AutoCAD 2010 was released to replace it. AutoCAD 2015 was released in October 2013, and it is available in either 32-bit or 64-bit. See Autodesk's explanation of the different editions of AutoCAD for a description of differences between versions. Free AutoCAD download Through Autodesk's worldwide network of partners, AutoCAD, and other Autodesk products and services, are available for

---

download without a license, and with a range of different customization options to suit individual needs. Individuals can download a copy of AutoCAD for free, for personal use, with a 30-day trial period, or alternatively can purchase a license at a discount. Additional software, referred to as add-ons, are available from a range of partners, and often include customized licenses for a range of different usage scenarios. For schools, businesses, and government agencies that want to use Autodesk products for licensing and for which Autodesk's default usage terms are not acceptable, Autodesk offers an Open Architecture License. Unsupported versions The Autodesk website provides a list of software versions with limited support and requires upgrading to a newer version. There are some other Autodesk products that are not available for download. In April 2010 Autodesk announced that Autodesk 2011 will be the last version of AutoCAD to support 32-bit versions of Windows. For users of 32-bit versions, it is

---

recommended that they migrate to a 64-bit version of the operating system, if they have not already done so. Reception AutoCAD is used in a wide range of industries, including construction, engineering, engineering design, and architecture. It has won many awards, including the Computing Perceptron Award, the Canadian Information Processing Society's CAD Award, and the National Geographic Imagination Award. In 2013 it was voted CAD application of the year by Cadalyst. See also: [AutoCAD on Wikipedia](#) [Autodesk AutoCAD software support](#) See Aut

APIs Autocad supports the following programming languages for automation: AutoLISP Visual LISP Visual Basic VBA ObjectARX (C++) .NET (C#) The last three APIs are for application programs only. AutoCAD can be controlled using two classes:

---

oAutoCAD oRibbonUI (Windows) Using these objects, commands can be executed on objects in the drawing using the following commands: RibbonPanel UpdatePanel CmdListPanel

AutoLISP AutoLISP is a Lisp-like language. The AutoLISP program can be used to automate any function in AutoCAD. AutoLISP is part of the AutoCAD Add-in. The syntax of AutoLISP is similar to Visual LISP. Visual LISP Visual LISP is an extension of Visual Basic and can be used to automate any function in AutoCAD.

Retrograde blood flow patterns in musculoskeletal arteries. The purpose of this study was to develop and validate a novel approach to retrograde blood flow analysis (rBFA) by using preoperative vascular imaging and 4-D time-resolved angiography. The

---

approach allows anatomic visualization and precise evaluation of blood flow in any segment of an artery, even those with complex configurations and/or abnormal wall types. The approach was applied to the aorta, iliac, and femoral arteries in 36 normal cases. Retrograde flow was identified by integrating the time-resolved images into a single image. The geometric and physiologic measurements were based on quantitative flow images. The number of flow divisions was calculated for each branch and was compared with the anatomic arterial type. Retrograde flow was identified in 38 of 37 test arteries. Mean number of flow divisions (n = 24) was  $0.9 \pm 0.2$  for aorta,  $2.0 \pm 0.5$  for iliac, and  $4.2 \pm 0.8$  for femoral arteries. Retrograde flow in the abdominal aorta was higher in the femoral than iliac segment ( $0.9 \pm 0.2$  vs  $0.2$
