History AutoCAD was first developed by Art Eisenman (and a team of colleagues) at North Carolina State University in Raleigh, North Carolina, United States, in the 1970s. According to the company, Eisenman was working as a research and development engineer for the National Aeronautics and Space Administration (NASA) when he came up with the idea for AutoCAD. The first version of AutoCAD, version 1.0, was released in December 1982. Over the years, the software has continued to evolve. Since the introduction of version 5.0 in August 2004, the software has been completely rewritten from the ground up, resulting in the very different and modern version 6.0 of the software. AutoCAD is widely used for the creation of architectural and mechanical drawings and for the preparation of images for publications. It is also used by graphic artists and print producers to create vector graphics (for example: logos and illustration), raster graphics (for example: photographs, line art), and three-dimensional objects (for example: architectural models, three-dimensional parts for manufacturing, etc.). Features Drawing components AutoCAD is a 2D CAD program. The 2D objects created by the user have a two-dimensional representation, and the perspective, location, and rotation of each 2D object is independent of all other 2D objects. In this respect, AutoCAD is similar to most other 2D CAD programs. However, unlike other 2D CAD programs, the user may freely edit and move 2D objects, such as lines, arcs, and text. For this reason, it is possible to achieve both 2D and 3D features in AutoCAD drawings. In addition to the 2D objects, AutoCAD also supports 3D modeling, which allows the user to create 3D objects, such as 3D solids, 3D surfaces, and 3D axis-aligned boxes. 2D and 3D objects AutoCAD is a three-dimensional drawing program and can therefore create two-dimensional and three-dimensional objects. A two-dimensional object is a flat object, such as a line, a circle, or a rectangular shape. A three-dimensional object is a shape that has length and width and, optionally, height. These shapes can be solids, curves, surfaces, or areas. The objects can be created by a user-specified command or by a command that is generated automatically.

The final design has been unveiled to the community with environmental health approval granted on Thursday morning. Inala Legacy is owned by Brisbane City Council and the City of Brisbane is funding the \$28.5 million upgrade, which includes new footpaths, trees, landscaping, children's playground, park benches and an elevated walking bridge. Mayor Tom Ollman says the project will create a public space of historic importance and encourage community engagement. "By enhancing the natural environment we will further improve the physical and social environment of Inala." The community consultation process includes a community vote and will be followed by development of a master plan and business case. The City says there are plans to deliver much more. "We have identified that there are also significant opportunities to provide enhanced public access to the river, as well as an opportunity to develop a new community-led initiative that will create a world-class dance and music precinct in the CBD." The City says it expects the redevelopment to generate significant economic benefits for the region, as well as community opportunities for residents and workers. A cultural precinct and a major arts and cultural precinct are also expected to be supported by the project. People can see the complete design, including community engagement plans, here:Q: If \$x\$ and \$y\$ are positive integers such that \$x^2 + y^2 = 40\$, find \$x + y\$.
