AutoCAD has been used in every form of architecture, engineering, and construction. The main feature of AutoCAD is its ability to integrate and display 3D models, which is essential in most building and infrastructure design. It is used by engineers, architects, and city planners for all levels of planning: from single-family homes to multi-million-dollar skyscrapers and dams.

Architectural modeling applications such as Autocad, ArchiCAD, Alias Architect,

Vectorworks, and AutoCAD LT are also used in the design of interior spaces. The latest version of AutoCAD is AutoCAD 2019. The previous release of AutoCAD was AutoCAD 2018. Software

The history of the CAD software industry
dates back to 1987. Autodesk was created

by Thomas L. Masson, who had previously been an engineer at the Allen-Bradley Company. The company was created after Tom Masson and other employees decided to sell a customized CAD/CAM software package called "Solid Edge", to potential customers. They were able to sell more than six hundred units within one year. However, by the following year, the volume was too low to cover the initial expenses for its development. Autodesk was originally marketed to small- and medium-sized enterprises (SMEs) of the manufacturing

industry in the 1990s and early 2000s. Masson wanted Autodesk to be developed and distributed at no cost. This goal did not succeed initially, and the company began charging for its software in 1991. Its product offering was expanded in the 1990s with the introduction of AutoCAD. AutoCAD — a design-oriented package - quickly established itself as a market leader. Further development of AutoCAD was achieved by integrating it with their competing line of CAM software, AutoCAD Architecture. Autodesk had

revenue of US\$1.9 billion in 2010, with EMEA and the Americas contributing about 60% of sales. Autodesk CEO Carl Bass has said that the company's revenue is forecast to increase from \$3 billion in 2011 to more than \$4 billion in 2014. In June 2012, Autodesk announced their intention to acquire the low-cost, widely used open source software package uDraw. It is a CAD app for mobile devices. In October 2016, Autodesk Inc. announced their intent to acquire an undisclosed company in the United Kingdom that owns the intellectual

property of KeyShot and Photonic Flow, which are used for producing photorealistic images in real time for 3D models in Autodesk Inventor. The acquisition of these assets were completed on June 1, 2017. In February 2017, a1d647c40b
