As of August 2018, it is installed on over 80 million computers worldwide. Since the invention of the first CAD system in 1843, the design industry has used many different CAD programs, each claiming to be the best. In the following decades, even as computer technology improved, few CAD programs had a stranglehold on the market. The dominant CAD programs changed over time. In the 1970s and 1980s, CAD programs were exclusively produced by large computer companies. In the 1990s, a group of smaller CAD firms started offering CAD programs. In the 21st century, a handful of startups and large corporations have swept aside many of these firms to claim dominance of the market. In 2008, the market for CAD software had surpassed \$3.6 billion, and according to the IDC, worldwide spending on CAD is expected to exceed \$6.5 billion by the end of 2018.

Early history The first CAD systems were invented by Jules Horowitz and Edward Douglas in 1843 for the purpose of creating detailed models of mechanisms. The CAD industry developed gradually over the next century, as CAD tools were adopted for a wide variety of uses. Edwin B. Foster's Chainlink module for his 1933 Harvard Mark I computer was the first commercially available CAD system. J.C. Milner's Stubbility was the first commercially sold CAD program for the commercial market. The first CAD program to be installed on a large computer was Mechanical Maniac by IBM in 1953. In the 1960s, the first CAD programs started to be sold as integrated parts of larger software systems. Software houses like IBM, DEC, and Unisys started offering the first integrated CAD/CAM systems. By the early 1970s, many manufacturers in the US and Western Europe were using CAD software. DEC announced a "Minimum CAD package" in 1973, and a year later, a "Computer Aided Drafting System" was published by the German firm Geddes/Warnert in Frankfurt am Main. That same year, IBM introduced "Computer Aided Machine Design" in the UK, and a year later in the United States. In 1974, the French company Cimatron became the first vendor to offer a complete, integrated CAD/CAM package to the European aerospace market. This was marketed under the name "Cimatron Systeme". In 1974, Autonetics of the US introduced its R-Series tools. In 1977, Arup of the UK introduced Autodrill,

What's New in the AutoCAD?

Import and make changes to existing drawings (a.k.a. “Markup Assist”) and even bring drawings in from other AutoCAD users. Send your own markups to remote users so they can instantly accept or edit your work. (video: 2:25 min.) Use Hyperlinks in Place: The ability to link objects to their adjacent areas of the drawing, regardless of what layer they’re in, enables greater editing flexibility and gives designers a more robust toolset to build and edit geometric layouts. (video: 1:38 min.) Make hyperlinks in your drawings to support more design iterations and enhance your workflow. Select the object, and you can drag and drop hyperlinks to a variety of locations in your drawing. (video: 2:18 min.) View and Manage Documents: The new Documents panel lets you navigate and organize multiple documents. Select the object that you want to move to a new drawing to start a new document. (video: 1:12 min.) Keep all of your drawing documents together in a single panel and access them from any drawing. Use the dropdown list in the Documents panel to select a document or folder. (video: 1:16 min.) Hyperlinks are now presented in a panel when you select any object. In this panel, you can link to any other drawing or a Web page. You can also right-click and create a hyperlink to any object. (video: 1:25 min.) Use Markup Assist with a mobile device. (video: 1:45 min.) With the Share panel, you can share a view of your model to a remote machine or to a mobile device. Use a mobile device to view your model on any touch-enabled device, and you can do what you want with it. (video: 2:11 min.) Change the look of a view using 3D look and feel. (video: 2:35 min.) With the Camera view, you can quickly change the camera view. Use the view tab to specify your desired view, and you’ll see the camera icon change to show that the view has been selected. (video: 2:11 min.) Use the free-form geometric shapes to quickly and easily create shapes. By applying effects to a free-form shape, you can get the look of a 3D model in your drawings. (video: 2:
