Easy Duplicate Finder Portable Crack With Product Key Download [Win/Mac] (Final 2022)

* Easy Duplicate Finder Portable Product Key is a software that scans your computer and reveals all duplicate files. This way, you can delete the copies and free disk space. * Since this is a portable product, the program doesn't need to be installed, so your Windows registry entries do not change. You can also store and run the tool from an external device. * The user interface of the program may seem overwhelming at first, but navigating through it is simpler than it looks. * The first thing you need to do is configure search options. Besides selecting the directory that will be scanned, you can define masks (e.g. file extensions), set minimum and maximum file size, exclude system folders and protect other system items. * The search process displays results with original and duplicate files. So, you can view the file name, path, duplicate group, size, time and date of last modification. Duplicate groups are delimited by colors (white and green), so you can easily spot them. * The next step is to select the duplicates which will be moved, deleted or renamed. So, you can select all dupes from the current folder or from the selected branch of subdirectories, or you can leave only the newest/oldest version in each group. * The program uses a low amount of system resources, comes with an online step-by-step user guide, allows you to quickly access commands via hotkeys and takes plenty of time to finish a scanning task. * However, since it presents a risk for first-time users to accidentally delete important files (although some Windows files cannot be deleted, for instance), we recommend Easy Duplicate Finder Portable Full Crack to power users only. Keymacro is a powerful tool for users who need to automate any keyboard shortcuts. With this tool, you can easily make the same keyboard shortcut from different windows, with different parameters (e.g. different buttons on the keyboard, different programs or buttons with your own script). This tool is ideal for professional users who have a need to add keyboard shortcuts for repetitive tasks. Every time the desired key is pressed, the program searches for the button named in the shortcut (if there is more than one button, the user can define which button is pressed). After selecting the button, the program sets the parameter of this button for the whole session (keyboard shortcut or script). Keymacro offers a great number of options. You can add keyboard shortcuts by simply writing a code for a desired button, or you can select an existing program to open a specific folder.
