Can we attach events in Java GUI In java, there are more things which can be done from the GUI than by calling the functions in java. What I want to ask is, it is possible to put some functionality on all events such as mouseClicked() at the class which extends the JFrame or JPanel. It means, we can put one function in all JFrames or JPanels and can call it for all types of events.

A: You can create a class that holds the logic you want, and then you can use that class as a listener, like this: public class MyListener { private JFrame frame; public MyListener(JFrame frame) { this.frame = frame; ... } public void windowClosed(WindowEvent e) { ... } public void changeSelectedItem(ChangeEvent e) { ... } //... rest of the listeners } Then you can do something like: frame.addWindowListener(new MyListener(frame)); //... frame.removeWindowListener(listener); //... This assumes that you want all of your JFrame's windows to act the same way, but it could be easily extended to act differently, as you need. Also, don't throw errors in the listener functions. It will catch those exceptions and you will be unable to use them. Jay Som 'Free' LP Artwork and 09e8f5149f

What's New In Simple Wifi Meter?

===== Simple Wifi Meter is a small-sized gadget designed for Yahoo! Widget Engine, which displays a meter for measuring the strength of wireless network connections. It features customizable options for those interested in changing its colors. Yahoo! Widget Engine must be installed to be able to get this tool up and running. Although the project has been discontinued by the developer, it can still be downloaded, in order to integrate widgets. On the other hand, this means that it won't receive any further updates. The wireless network connection is automatically detected and monitored by the app at startup, and the meter's level indicates how strong or weak it is. This small window can be moved anywhere on the screen by clicking and dragging it with your mouse. As far as customization options are concerned, it's possible to set the fill and background colors, hide the wifi icon, as well as fill the meter down instead of up. Thanks to options shared among most Yahoo! Widget Engine tools, it's also possible to set Simple Wifi Meter's window to always stay on top or on bottom (compared to other active windows). Its opacity level can be tweaked to make it more or less transparent. What's New in Version 1.0.0.2:

===== - Fix for not able to change rotation in certain cases - Fix for wrong background color on Windows 8.1 tablets - Fix for default cursor position after updating - Fix for certain settings read/write option - Fix for option to hide the wifi icon - Translated to English - Fixed text color - Other minor fixes Simple Wifi Meter is a small-sized gadget designed for Yahoo!
