CHICAGO – October 30, 2016 – A new study by The Jaffe Center for the Study of the Drug Abuse and The Neurobehavioral Diagnostic Center at Rush University Medical Center has found that the drug, kratom, is effective for opiate withdrawal when used with drug counseling and support. Kratom has been used in Thailand, Malaysia, and some parts of southeast Asia for more than 2,000 years. It's a woody evergreen tree with white flowers. Users say it's effective in reducing pain, reducing stress, and providing a boost in energy. The new study was published in the Journal of Psychoactive Drugs. "Opiate dependence is one of the most prevalent and debilitating mental illnesses worldwide," said Dr. Markus Keller, professor of psychiatry at Rush University Medical Center and a leader in the study. "There are few treatment alternatives that actually work. Kratom may be a one of them. "The study found that patients used the leaf of the tree for three to six months to help decrease withdrawal symptoms and physical pain," he continued. "There are no adverse side effects that we have seen." The study included 20 adults, half of whom were opiate dependent and half who were opiate-free. Half of each group began

using kratom for three to six months, and half did not. Kratom was given to the opiate dependent group for three to six weeks. In the beginning of that period, they were given counseling and group counseling sessions
