Step 1: Define a Favorite Filter Once you've picked out a favorite filter, click the Save button to save the settings as a filter preset for later use. Step 2: Use the Primary Color Filter Open the file that contains the picture you want to alter. Make sure you're using the version of Paint.net that has the filter (currently V3.2). Then, select the "Tools" menu and choose the desired filter. Step 3: See What the Filter Does to a Picture The filter may add a hue or remove one, depending on how you adjust the brightness, saturation, and color balance. Quick Tips: Using the filter to edit an image will automatically adjust the RGB balance in the Edit Colors dialog. It will then create a copy of the settings of the preset on a new file with the same settings. You can then import that preset into Paint.net and apply it to any picture you want. If you don't want to import the settings into another file, you can rename it "Save as Preset". Step 5: Try it Out Once you create your own filter preset, you can try it out on a picture. To apply the filter, select the color preset that you just created and click the "Apply Filter" button in the Filters and Adjustments tab. The story of Orson Scott Card and Ender's Game had a lot of supporters. Orson Scott Card is one of my favorite authors. He has a brash and unique voice, and wrote a book that tackled some of the most sensitive subjects of our time. To many people, Orson Scott Card is a bit controversial. He's strongly opinionated and he can say some things that people can disagree with. But if you read his books or listened to his lecture, you saw him as a man who wished to make space for others and encourage people to think things through. He's a character of integrity and a good man, and he's had a positive impact on millions of people, including hundreds of Evangelicals who were influenced by his books and learned from him to be open-minded, respectful, and intellectually engaged. My wife and I are still fans of Orson's writing and are excited to learn more about him. There are no doubt things he's done in the past that give me pause, but he's written some of the most encouraging books I've ever read. That's why I'm excited to see him share this story about how he went from pro-life supporter to pro-gay rights supporter. It's an important story because it highlights the fact that the same man who published homophobic books and told a girl that she should kill herself and die "with God" is also the same man who wrote a book that encourages people to see their faith through a new lens. Orson Scott Card's lecture is scheduled for Wednesday, June 8th at 8PM EST on Catholic Spirit Camp. Get tickets here.
