The problem here is that I'll need to add that method to each class so they can have their own, different method, so I'll end up adding this method to every single class I have in the code. But I want to know what is the best way to manage this situation. Option 1 - Just add the method: public class Engine { public void draw() { //... } } Option 2 - Make it an abstract class: public abstract class AbstractEngine { public abstract void draw(); } public class Engine { //... } Option 3 - Make it a static method public class Engine { static void draw() { //... } } Which one is the best way to do this? A: Firstly,
