Circuit Wizard Release Code (1.15). Released on 2015, November 18.Q: Calculating the average of the most common element in a list (Python) For an assignment I'm trying to iterate through a list of words and find the average of the most common elements. The program must then print the title and the most common word in a format of: "The most common word is: _____. The title of the book is: _____." For example if the program read: s_cat s_min, s_earth, s_dog, s_sat, s_sun, s_min, s_lion The output should be: The most common word is: s_sat. The title of the book is: The Origin of the Species. Here's what I have so far. print("The most common word is: ") n=0 min_word=max_word="" max_word_count=0 wordlist=[] words=input().split() for word in words: if(word == min_word) : max_word_count=max_word_count+1 elif(word!= max_word): min_word=word count=0 print("The number of times the word " + max_word + " appears is: ", max_word_count) def count_occurrences(word): count=len(wordlist)-len(wordlist.remove(word)) return count while nmax_word_count): min_word=max_
