Worst of the Worst - K.P.O.T.O.D.: TrynotoDestroy the World and Save it, Anno 1404, Annoying Orange 17 - World of Warcraft Repack, Best of the Best - The Best of America's Pimp Slaves, Serum fatty acid binding protein (FABP) isoform 4 in chronic liver disease. Fatty acid binding protein (FABP) is expressed in hepatocytes and released into the bloodstream. The isoform (4) is associated with intracellular lipids and is modulated by hormones and nutrients. It has been suggested that its release may be altered in certain diseases. The aim of the study was to assess the serum levels of FABP4 isoform in chronic liver diseases as compared with healthy subjects. The study included 27 patients with chronic hepatitis C (CHC) without cirrhosis, 32 with CHC with cirrhosis, 16 with alcoholic cirrhosis, 14 with chronic hepatitis B (CHB) and 17 healthy controls. FABP4 serum levels were measured by enzyme-linked immunosorbent assay. As compared with CHB patients, levels in CHC patients with cirrhosis were significantly higher (median 60.7 vs. 33.0 ng/ml, p 0.01). It is a solid, single-pane aluminium design and comes complete with all the necessary casters to make it easy to move around. The item you've chosen to view is no longer available from us, so you can no longer order it. However, we've put together a
