Example 2: Rhodes Affair 2 Plugin for Reaper (Win x64). Vibrational and electronic circular dichroism: A rigorous computational study. Vibrational circular dichroism is a relatively new phenomenon and yet a topic of growing interest. This feature comes with the advantage of giving complementary information to that of electronic circular dichroism (ECD), but also with the issue that vibrational excitations can directly mix with electronic excitations and may therefore be confused with the latter. An in depth understanding of the phenomena therefore requires a distinction between

If you are a Windows or Linux system. .As temperatures continue to rise across the UK, there are some practical tips to help keep your home, office, or any other place cool and comfortable. We've collected some of the best tips for how to keep cool, as many homeowners are struggling to keep up with the temperatures, as we head towards the end of July. Out of gas? Make a cool, dry place warm It may seem counter-intuitive, but to keep your air conditioning costs down, it may be wiser to run your air conditioning on the cool setting. If you are already at the cool setting, opening the vents in your home or office is a great way to keep cool, and the evaporator coils aren't working so efficiently. How can you make a cooling vent open up when temperatures rise? It's actually not that difficult - a window that has been installed with a few gaps, or a door that has a similar gap (think: french doors, or non-standard doors). Install a flexible duct-fitting cover that can have a smaller gap, and let the cool air out. Another great tip is to have your thermostat located on a wall, rather than on the ceiling. Being closer to the ground could mean that the air in your home or office will be cooler. Tips for keeping your home cool

1. Avoid home improvements that lead to heat gain. Home improvements that increase heat gain in the home include installing a water tank on the roof and walls or installing a swimming pool. Also, avoid installing a home improvement project that will increase your solar heat gain, such as adding skylights or locating the furnace in your attic.
2. Consider the direction your home faces. If you can change the direction of your sunbeam (the light coming into your home) or at least block it with a shade tree or skylight, you'll be less likely to heat up your home. If the sun is shining directly on the roof or into the house and into any windows, and there is no window covering for your summer breeze, consider purchasing a sun-shade or even a window fan for your home.
3. Use energy-saving heating devices and appliances. If you have a gas furnace, invest in an energy-saving thermostat. An energy-efficient ther
