professional civil engineers to approximately 300,000 by 1990. Although technical drafting skills were more important for drafting than for AutoCAD, the market research report stated that AutoCAD could increase awareness of engineering within engineering firms, as well as awareness of other professions such as architecture, by providing a means for standardizing technical design. AutoCAD was developed by Autodesk to provide a means for engineering firms to accomplish this. Many of AutoCAD's design features were inspired by a technical project at the

University of California, Berkeley, headed by professor Gordon Bell in 1969 and 1971. This research was organized by the Office of Naval Research (ONR), and under the direction of professor William C. Green of the Berkeley Computer Graphics Lab. The project used ONR resources and funding. Autodesk bought the AutoCAD source code in 1981. Main menu References Further reading Avery D. Application types Autodesk Architectural Desktop (ADT) (previously Autodesk Civil Design) – for the creation of architectural and engineering drawings. Autodesk Building Design Suite (BSD) – a suite of architectural and engineering applications. Autodesk Civil Design (ACD) – provides the design tools required to specify, design and

analyze civil infrastructure. The Civil Design applications are intended to be used by engineers and consultants who plan, design and construct buildings and other civil structures and infrastructure. Autodesk Electrical Design Suite (EDS) – provides the design tools for electrical systems, electrical installation and maintenance planning, design and analysis, and construction document control. Autodesk Electrical Design Suite (EDS) 2010 – the new version of the AutoCAD Electrical Design Suite Autodesk Mechanical Design Suite (MSD) – provides the tools required to

specify, design and analyze building mechanical systems and energy.

Autodesk Project Review (APR) – provides the software architecture for CAD review and approval. Autodesk Architectural Desktop (AD) – provides the design tools for CAD review and approval for the design, planning and construction of buildings. Autodesk Energy Design Suite (EDS) – provides the design tools for planning, design and analysis of building heating, ventilation, air conditioning and refrigeration (HVACR) systems, including buildings with chilled water. Autodesk Facility Design Suite (FDS) –

provides the design tools for planning and design of office and warehouse complexes, including offices, warehouses and distribution centers. It includes the ability to export facility layout as DXF, DWG, or PDF files, to be printed or used in other CAD software. Autodesk Structural Design Suite (SDS) – provides the design tools for the design, planning and analysis of construction projects of steel-frame buildings, primarily bridges, steel frame buildings, and other structures for which steel is the primary structural element. Autodesk TND (Technical Needs Document) – a

tool used to create professional-quality TND documents for clients and stakeholders. Autodesk AEC360™ and Autodesk AEC360™ 3D – AEC applications developed in partnership between Autodesk, Atos, and InfraGard that assist in preparing design data for environmental compliance certification. Add metadata to your drawings so you can find and retrieve your information more easily. You can also add comments directly to annotations, view measurements, capture the full-resolution image of a drawing, and more. (video: 3:01 min.) Sharing a drawing with just a link is no longer the default. AutoCAD 2023 enables you to share links with descriptions or comments, or a URL that points to a media file. (video: 3:56 min.) Add customer comments and orders directly to drawings. Incorporate customer feedback directly into your designs, no matter

what CAD software they use. (video: 4:12 min.) Sync your annotations, dimensions, and other information across design programs and mobile devices using the new Markup Assistant. (video: 1:28 min.) Team collaboration: Send projects and comments to any team member. (video: 1:22 min.) Create a team “hub” that you can share with any team member. Members can make comments and requests, follow the discussion, and keep track of changes. (video: 3:05 min.) Add or modify comments, edits, files, and tracking information directly to

comments. Link team members directly to comments, and add any comment or change to any comment you see. (video: 2:47 min.) Keep track of projects, comments, and other team information in a shared project folder. Use comments to quickly send feedback. Add comments to any viewable drawing, or to comments you make. (video: 2:09 min.) Achieve a greater understanding of your designs with the new view import. Easily create your own views to get to any part of your design, and seamlessly upload them to share with the team. (video: 3:59 min.) Revision

control: Revision control keeps track of your drawings and any changes you make, even if you are offline. Import revisions from any other software, such as file comparisons from other file-sharing software. (video: 1:42 min.) See which revisions have been modified since you last opened a drawing, and make sure that you are working on the most current versions of your drawings. (video: 1:43 min.) Team BIM: Using the new BIM Viewer, choose to work with any BIM-compatible drawing—not just those from
