Extends AutoCAD R12 Enterprise to support modern application development technologies. Allows you to create whole programs or functional subroutines to be used as standalone applications, to be linked as components in other applications or to be used as

embedded applications in AutoCAD. In later versions of AutoCAD it also added support for Flex Builder and Java in the form of the Java Application Programming Interface (API).

Customization interfaces The basic way for customizing AutoCAD is to edit the properties of shapes, layers, layer styles and drawing units. Other ways to customize include using visual programming languages such as Visual LISP.

AutoLISP AutoLISP allows application developers to develop applications using an intuitive visual programming interface. For example, AutoLISP allows the developer to use commands such as “Plot” to create plot applications. While all AutoLISP application development can be done using AutoLISP, there are restrictions on what can be done. AutoLISP is a proprietary software development environment. No longer supported with the 2015 release of AutoCAD, it is still available for purchase.

Visual LISP Visual LISP is another visual programming language supported by AutoCAD. It is a subset of AutoLISP and can be used for the same type of applications. Visual LISP has a proprietary syntax, and is also not available for purchase.

AutoCAD Visual LISP AutoCAD Visual LISP (AutoLISP for AutoCAD) is a language extension of AutoLISP that allows for visual development of AutoCAD applications. It is part of AutoCAD and has been licensed by Autodesk since AutoCAD 2.0.

VBA VBA (Visual Basic for Applications) is a Microsoft programming language that allows the creation of AutoCAD applications.

It can be used to automate common operations, as well as develop user interfaces for AutoCAD. It was not initially included with AutoCAD. There was a version of Visual Basic for AutoCAD, which could be used as a programming tool for AutoCAD. VBA was later adopted as the programming language for Autodesk Inventor. It is no longer supported in AutoCAD 2016 or later. However, it can be used with earlier versions of AutoCAD and AutoCAD LT to provide custom toolbars. AutoCAD LT 2017 and later versions support V

Video tutorials on how to use the features mentioned here: Improved tooltips and label formatting: Tooltips appear in context as you move the cursor across the drawing screen. Labels appear in the top right corner of the screen. You can format tooltips and labels using traditional or digital fonts, sizes, colors and attributes. Automatic generation of additional label and tooltips for assemblies: An Assembly Layers dialog displays when you create a complex drawing with several layers and assemblies. You can also import an assembly into a drawing that has label or tooltip information. Enhanced navigation with the paper space: Get easy access to the tools and attributes that you most frequently use with this new paper space. As you move your cursor from one part of the drawing to another, you can access key information

right where you are. In addition, if you are using Xrefs to navigate, you can now navigate directly from the history view to a specific drawing to get to a particular layer or assembly. New viewports, commands, and features for the DXF/DWG format: Improved DGN 2.0 support: Export and import drawings with all their features: Import and export DGN 2.0 files as DWG or DXF.
