EchoVNC is an open-source VNC (virtual network computing) client and server that support Win9x/ME/NT/2000/XP/2003/Vista and all X-11/linux terminal emulators. It is also packaged as a windows service (.exe) to easily run as a service on all 32-bit Windows platforms. It is a small, easy to use, lightweight, text-based peer-to-peer file sharing program. It is designed for P2P file sharing networks and uncovers all the basic networking features (client & server architecture, multi-peer network configurations etc.), yet, at the same time, it is very easy to use. zXiX - Encrypt/Decrypt HTTP communications over SSL/TLS. zXiX aims to provide a low-level interface for SSL/TLS encrypted HTTP communications. It is capable of supporting both plain/legacy HTTP over TLS and the full HTTP/2.0 (and/or SPDY) protocols. zXiX is written in C++ and Java and requires the OpenSSL library. HttpClient is a general purpose HTTP client for a Java program. Currently it supports both HTTP 1.1 and HTTP 2.0 protocols. It's used in web applications, mainly as a way to deal with server issues in, for example, REST calls that crash the server. Mozilla Firefox is a free, open-source web browser developed by the Mozilla Corporation. It is the de facto standard web browser for the Windows, Mac, and Linux operating systems, and has been the market leader since its introduction in 1998.[1] Aids in providing better wireless coverage. The link quality metric for a wireless network is the signal-to-noise (SNR), and generally one attempts to optimize one of three parameters: carrier-to-noise ratio (CR), BER, or throughput. Some wireless quality of service (QoS) solutions, such as 802.11n, may attempt to optimize more than one of the three parameters.
