Depending on what camera you have, there are two modes: the Creative (available on all cameras) and Expert (available on the advanced DSLR and super-zoom cameras) modes. Creative mode is for the absolute beginner who wants to do as little as possible, with the only objectives being to crop and add effects. Expert mode (available only on more advanced DSLR and super-zoom cameras) allows you to do more complex tasks such as creating and manipulating layers, using filters, painting, cutting and pasting images or objects, etc. Mastering the

expertise is fairly easy once you get the basic skills down with the Creative mode. You can access these two modes by using the camera's menu system. Many cameras also let you access them by pressing a button on the top of the camera or the menu button on the back of the camera. In this section, we show you how to add layers to your image, crop, and modify your image and then save it as a new copy. Editing your image is fairly simple and straightforward. The hardest part of the editing process is deciding what you want to do — especially when Photoshop is as powerful and full-featured as it is. Don't forget to press the menu key to return to the main menu after you add a new layer to your image or do anything else to a layer. Many features, such as rotating a layer, require you to add a new layer before you can make the adjustment. So always keep your layers in order and make sure that you don't lose any image editing history by adding and removing layers. Adjusting brightness and contrast Contrast (or brightness) adjustments allow you to

make subtle changes to your image. The adjustments are used to make a dull image look more like an inkjet print. (If the image you've captured has a lot of detail and you want to "soften" the image, you can use your image-editing software to do this type of adjustment, but do so carefully because they can remove detail if they're made too much.) The adjustments also allow you to enhance skin tones, change the colors of the image, and correct problems with contrast. (We cover these topics in much more detail in Chapter 7.) The following steps show you how to adjust the contrast in your image: 1. Press and hold the OK button to open the Adjustments palette. The Adjustments palette (refer to Figure 2-1) has a range

Q: mysql.connector and pymysql I'm trying to test pymysql in a python script and in order to use it inside a django app. I have installed in my virtual environment all the packages involved (pymysql, mysql-connector) and I have the file declared in my settings.py file:

```
DATABASES = { 'default': { 'ENGINE':  
'django.db.backends.mysql', 'NAME':'mydb', 'USER':  
'root', 'PASSWORD': '123', 'HOST': 'localhost', 'PORT':

'connector' is not defined A: I was also having this issue. This was caused by the fact that the mysql-connector plugin is not installed in the python venv. Use this PIP command to install it `pip install mysql-connector` This

invention relates to apparatus for relieving twist or distortion in a window sash when the sash is moved into its closed position as the sash is being closed. It is a well known problem to provide a window having the capability of being opened and closed, with such windows having different height dimensions. More specifically, a conventional window may have a dimension of one to six inches, and this dimension may be varied simply by varying the length of the overall structure of the window. It is also known to provide casement windows which have a vertical pivot joint with an upstanding sash being movable between a closed position adjacent the window frame and an open position in which

What's New In?

December 20, 2016 It's been a long week. It's been a long month. It's been a long few days. But it's also a Christmas

week and that means a long weekend. I think many of us don't want to run the risk of coming back after it's over. It's not that we don't want to come back, we just want the rest of it as well. A long weekend, while wonderful, is a happy occasion. But it's also a sad occasion as well. The traditional long weekend is also the first time you haven't watched *The Office*, have a lot of people around, don't drive everywhere, and didn't have to work on Monday and Tuesday. And it's the first time someone hasn't said "happy new year." It was all so normal before that. But there are more than just the regular 3.5 days off. The difference with a weekend being the first of 5 this year is just about everyone is distracted. It might be different for you, but for most of us it's the first time we don't have to go to one of our friend's houses for Christmas. It might be the first time you don't have to wake up at a friend's house and make sure everyone is awake and ready to go to church. And most of us are distracted by the entire thing. You think you want to get a few things done. You want to

go to Costco. You're going to check on your brother, sister, uncle, or niece's status at the church. But you can't. Everyone else is distracted. We're just working on our own distractions. We don't have any new toys or gadgets to show off. We don't need to get anything done. We just want to spend time with the people that are important to us. But it is very hard to be distracted. Christmas is special. For one, it's a day where we believe in something. Even if it's only a few days. And that's what's so sad about this long weekend, it's been too many days where we
