Art Contest: Fan Art Contest: The link to the Fan Art Contest thread is located at the end of the Modding Program Overview The link to the Fan Art Contest thread is located at the end of the Modding Program Overview regainearthfans @ TA3 I am a big Regain Earth fan, you are my one of my favorite Regain Earth mods, and it was nice to see that you contributed to the fan contest. Now, there is some of my drawings from that mod, and I hope you like them. My name is David Serra and my handle is Sesrbion on MGoStaff This is my own reaction to the competition which was a difficult one to win. My favorite part was the story, I can't read people but I could see from the thumbnail that you had a cool take on it. I think it has a story to it. I really liked the art and the playability of it. It was a good update. You could even see the art style improve which was great. I am so glad that I discovered your work, your art and your humor. After reading the description of the competition, I came in with no expectations, but it seems I made the right choice. I really like the story, the level design, the concept, I just loved it all. I really like how you told the story in the most natural way, without making it seem like you were just trying to force a story into it. It was a joy to read.

Visual Novel Engine is a visual novel framework for Windows and OSX, written in java, that lets you create visual novels with drag and drop simplicity. You can use this engine to simply play your visual novels, but it can also be used to create new visual novels. You can write your own visual novels using the engine without needing any programming knowledge, in just the same way that you would create a visual novel in any other program. A minimal modding system is also included to make simple text and action modifications to your visual novels. HOW TO CREATE A VISUAL NOVEL WITH VNE: You can choose to make your own visual novel from the start, or use some of the samples the engine provides. You can create a blank visual novel with the "blank" template in as little as 2 minutes, and then build your story from there. You can also import your own visual novel from a.zip file for conversion to the engine. You can add text, music, images, and many more customizations to your visual novel. Visual Novel Engine supports characters you can import into your game. These characters have a few pre-made dialogs they can say, but you can also make your own dialogs. You can also modify the dialogs of existing characters, including changing the body shape, character color, gender, and other customizations. The engine also has multi-part dialogs that you can use for pre-set plot points in your visual novels. You can create as many multi-part dialogs as you want and name them whatever you want. You can even make text-only multi-part dialogs (dialogs that you create do not have their own

body type). At the moment, this engine features auto-translation of text, and does not require any manual translation. Take a look at the video demo below to see for yourself!
