Pitch, March 28th 2018, 11:31 AM In high school, I saw a presentation by Ms. Susan Staiano, a Teensy Project engineer, who had created a small device of 1.5" by 0.8" for typing with your finger. Smaller and lighter weight than most physical keyboards, no need for a mouse. 2. n, March 28th 2018, 09:25 PM I am currently using a small embroidery machine and an old sewing machine, (Both mechanical from the 1970s, if I remember correctly). I had not considered using the sewing machine for this purpose. They used to make great big eye coverings called "Manga" which covered the complete eye, and had a slit to see through and light. It was only cheap back then, I think they were under \$10. I am not familiar with sewing machines and how they work, but I would assume that a sewing machine would be able to perform as well as a computer mouse, or better, as you would not have to move the mouse back and forth, across the entire surface. Both machines are not connected to the Internet, but I will check to see if my old sewing machine has USB ports, and if it does not, I will try to find a way to convert the sewing machine to USB and use it for this purpose. If the sewing machine is connected to the Internet, it is possible that it could be hacked remotely to act as a keyboard for the computer, but I am not willing to attempt this, as I am not going to have internet access for a while. SewWrite currently only has the ability to type diacritical marks, such as accents, or ligatures, but would be interested in researching how to convert a sewing machine to work as a touch-type keyboard for the computer. 3. d, March 29th 2018, 07:41 AM Thanks much for your inquiry. SewWrite can be used with any embroidery machine that can run a personal computer. If the machine is connected to the Internet (which is probably

RuneScape is a browser-based fantasy MMORPG. It was originally released in June of 2001 for Microsoft Windows and later re-released for Macintosh in 2002. Runtastic's versions use the Java 1.5 security model, allowing them to run natively on OS X and Linux. Due to certain restrictions in the Java language, there's a bunch of custom code and plugins that had to be written for certain features that made RuneScape great (or at least good).
