WebID ( is a web service which gives users the ability to create a unique identifier for themselves and share it with their friends and colleagues. This web service can be used as a social login for your website. This gives your website visitors a unique identifier and enables them to create a single password for your website. This web service is targeted at people who use different social networks (Twitter, Facebook, Google etc) on a daily basis and who are looking for a convenient way to remember a unique identifier for their social networks so that they don't need to keep logging in and generating one identifier and password for each service. WebID acts as a single sign-on service for social networks. You can use WebID to connect your website to multiple social networks in a single login/password process. WebID doesn't support password reset mechanism. But in case of connecting your website to any social network

## What's New in the Weblog Downloader?

This software is the php version of a weblog downloader by Doss. This is the most simple php version to allow you to download the archive of a weblog. It's basic and not optimized. It just keeps the link of the weblog archive and the download folder for this weblog and it makes a html file with the download link and the name of the weblog. You can now copy and paste the link to your browser to download the.zip of the weblog or click on the link and it will automatically download the file for you. You can also import a weblog from a link. The setup will ask you for the name of the weblog, an email and a name for your weblog. The system will then automatically send you a mail with the downloadlink of your weblog. Next you have to select this link and it will open a new window in your browser and the file will be automatically downloaded. If you don't have a domain name or a forum you can use the localhost address to import your archive. The software is running on PHP and uses the head function of php to find the information in the html files. It can easily be edited to import and export the weblogs. Downloader Version 2.0 by Doss is compatible with php 4.3 to 5.1. It is a open source program, the source code is available on the download page. It does not use any "advanced" function. It can export (but not import) weblogs. The Software is a template and uses no database. GitHub is where people build software. More than 28 million people use GitHub to discover, fork, and contribute to over 80 million projects. The owner and admin of the project are John Shaffer and Joey
