Photoshopped images can be removed from their original context, making them unattractive to most web designers. Try to give the viewer only the best quality of your images. Make sure your images are sharp and clean. Make sure that bleed text doesn't extend past the edges of the image, or graphic elements are positioned well. You may want to think about getting a program such as Photoshop Elements or Picasa that is a lot less expensive. Photoshop Elements The latest version of Photoshop Elements is 11.0. The Photoshop Essentials feature set is available on the web at www.adobe.com/products/photoshop_essentials.html. Organizing Your Files If you don't have your files organized, or just haven't gotten around to organizing them, you'll spend more time hunting them down than you want to. Organizing can be a tricky business. You need to make a plan and stick to it. Often, the first step is to re-gather all your files and see what they are. Your file structure should be based on the images you shoot. You're putting those files out into the world for a reason, and they should be organized in a way that makes sense to you and the client. If you keep your files in a folder, that's fine — up to a point. As you add more files, and your file system begins to catch up, it can be tough to find specific files. If you're using the Mac, try to keep the original file name, or a descriptive name that makes sense. For example, on the Mac, type out the file name, including any metadata or comments you've assigned, as a text string that you save. Of course, you must leave the extensions off. You may, for example, have created

1,2,3,4-tetrahydroquinoline ring: A privileged scaffold in natural products, drugs, and chemical biology. 1,2,3,4-Tetrahydroquinoline (THQ) is a valuable scaffold with promising biological activities in the development of drugs and chemical biology. It is extensively found in a broad spectrum of natural products and exhibits a broad range of biological activities, including antioxidant, anticancer, antiviral, anti-inflammatory, and neurodegenerative properties. Natural products containing THQ possess excellent herbicidal, fungicidal, insecticidal, anti-allergic, and antifungal activities. Herein, we compile the latest comprehensive review on the biological activities of THQ and its derivatives from natural products, with an emphasis on the discovery of THQ and its derivatives, general syntheses of THQ and its derivatives, and their biological activities. The present invention relates to a shock absorber assembly for supporting a rotor, and more particularly relates to a shock absorber assembly which is suited to reduce an impact or vibration applied to a rotor during its rotation. In the field of a flywheel energy storage device, it is customary to use a shock absorber to reduce an impact or vibration applied to a flywheel and a rotor during its rotation. The following patent publications disclose the conventional shock absorbers, each of which is arranged to reduce an impact or vibration applied to a rotary member during its rotation. Japanese Patent Kokai Publication No. 2001-87091 discloses a flywheel having a shock absorber. The shock absorber includes a damper body having a cylindrical bore, a rod concentrically fitted in the cylindrical bore, and a leaf spring fixed to the damper body. This leaf spring is arranged to have one end fixed to a flange fixed to the damper body at a position adjacent to the other end of the rod, and to have the other end engaged with the damper body. This damper body has a cut formed at a position corresponding to an axial-direction central position of the cylindrical bore. Accordingly, when an impact is applied to the rotor in the flywheel, the damper body is moved toward the rotor. As a result, the other end of the leaf spring is pressed against the flange, and an operation of the damper is activated. When the rotor is rotated after the operation of the damper, the damper body moves toward
