Fonts Photoshop comes with a variety of fonts. Photoshop uses a non-standard font for menus in most applications. The fonts available in Photoshop are Chalkduster, Chalkdrawer, Courier, DC Default, Dodoni, Helvetica, Impact, ITC Bodoni, ITC Brush, ITC Garamond, Joanna, Macintosh, Monaco, Museum, News Gothic, Neutraface, Phoenix, Proxima Nova, Punctuation, Courier New, Wingdings, and Zapfino. Photoshop also includes Arial, Amstel, Cheltenham, Windows Glyph, Noteworthy, Source Code Pro, and Stencil. Effects Photoshop provides several non-destructive effects. Some of these are free, but if you want to save them for later use, you can purchase them from the Photoshop Web site, Adobe Customer Support, or your local Adobe reseller. Effects like blur and vignetting are built into Photoshop. Adobe provides several options for blurring images. You can blur the entire image, a specific portion of the image, or even an object. You can also blur an object using the Blur Gallery. Blur Gallery allows you to choose the radius of the Gaussian blur or the strength of the Gaussian blur. Vignette effects, however, are not built into Photoshop. To apply a vignette effect, you must use the Vignette command. There are four types of vignette effects: Soft, Medium, Hard, and Radial Vignetting. You can use radial vignetting to make the edges of an image appear to recede into the distance. When you create radial vignetting effects, you must first select the type of vignette you want to create. You can choose Soft, Medium, Hard, or Radial. In Photoshop, the radius of the vignette effect is automatically calculated. You can then decide what percentage of the image you want to darken at the edges. You can use the Percent slider to choose how much to darken the edges, from 0% to 100%. The Border Effect is another type of vignette that is not built into Photoshop. You can create border effects in Photoshop using the Border Effect. Border Effect allows you to choose from several borders, such as Brown, White, Black, Red, Blue, Purple, Gray, Green, Yellow, Orange, Pink, and Brownish Blue.

[Identification of a new thymic stromal keratine in human fetal thymus and adult thymus]. Thymic stromal keratins (TSKs) have been shown to be the major stromal component of the thymic cortex. Keratins, the most abundant structural proteins of keratinized epithelia, are present in many other epithelial tissues, and for example in human hair. In view of this, we have decided to show whether they are expressed in fetal human thymus. TSKs were immunocytochemically stained with two antibodies to keratin polypeptides. In the thymus of the 21th week of gestation the TSKs were strongly positive for keratins K6 and K16. In the thymus of the adult the TSKs were faintly positive for keratins K6 and K16. It is likely that some of the functions of the thymus are performed by stromal TSKs in the 21th week of gestation. Officers were dispatched to a home in the 2700 block of Foothill Boulevard around 9:15 p.m. on a report of a person who had shot himself, said Officer Josh Rubenstein, a spokesman for the Oakland Police Department. Two men were in the home, and both had gunshot wounds. The suspected shooter was transported to a local hospital, where he was pronounced dead at 10:25 p.m. Sherman's iPhone was a key piece of evidence in the now-infamous videotaped altercation between the Seahawks star and the San Francisco 49ers cornerback. Sherman has said that the
