There are many APIs in Autodesk's 2010 platform, for example: Animating and Annotating GPS Support SoA The STEP API (System for the Transfer of Particle Information) has been developed to allow Autodesk to send and receive information from CADDisplay. STEP is the vector drawing standard used by most CAD packages. Autodesk developed STEP and STEP Part, an improved version of STEP that enables CAD packages to annotate and animate objects. STEP Part also enables the CADDisplay to supply animation information to Autodesk's designer. Autodesk continues to develop STEP and STEP Part. Autodesk's Annotation and Animation Manager (AAM) is a set of tools that integrates the basic features of the STEP-based Annotation and Animation tools. AAM integrates the tools in three areas: graphics, animation, and annotation to enable the delivery of annotation and animation capabilities to users of Autodesk products. The Graphics utility is a Visual LISP-based tool that enables the creation of 3D graphics and animation. The Animation utility is a Visual LISP-based tool that enables you to create 2D animation and color-based animation. The Annotation utility is an Excel-based tool that enables you to add text, lines, polygons, and other objects to an AutoCAD drawing. The AAM Architecture and Multimedia products allow you to create custom interfaces and integrated applications. Applications Applications are programs that are bundled with AutoCAD. Autodesk refers to these as "mini-AutoCAD". Most applications are marketed under the Autodesk brand name, but Autodesk also markets them under the names AutoCAD, Design Review, DWG Converter, MDS, and Design Research. Design Review: Design Review is an application which provides a PDF printer and a set of tools to collaborate with clients on the look and feel of a design, often seen as the first stage of an architectural design. Aesthetics applications: These are AutoCAD and 3D Studio products that provide tools to help architects and designers create and present their work as finished projects. Among these are the ability to create and present 3D models using a variety of rendering and visualization techniques and the ability to add animations and other 3D effects to a CAD model. Drafting: Drafting and detailing applications are used to create geometry and linework in a CAD system. These applications may be Autodesk-specific or third- ca3bfb1094

This invention relates to a new and useful method of storing logs and wherein the logs are positioned on a plurality of interlocking wire members that are interconnected to form a support means that can be positioned and stored in a space. It is an object of the invention to provide a new and improved method of storing logs and the like that can be manufactured in a simple, economical and efficient manner, and yet which is capable of a long life of service. Still another object of the invention is to provide a new and improved method of storing logs which can be readily positioned in a space and when removed from the space, the interlocking wire members automatically fold in on themselves for ready storage. Yet another object of the invention is to provide a new and improved method of storing logs which is capable of being easily stored in a space in which the entire support means may be easily removed from the space and yet which is constructed of relatively inexpensive materials and which is capable of use in a relatively wide variety of environments. What's New In AutoCAD?

Markup Assist guides you through drawing to quickly incorporate comments, labels, and other type. You can import from PDFs and images with the new Markup Import feature. (video: 3:45 min.) New in geometric dimensioning: Add distances or length measurements to your dimensions. Enter the distance or length from your cursor anywhere on your drawing. AutoCAD will figure out the distance automatically (video: 1:20 min.) A new dimension category (AX) for drawing algorithms includes the following drawing algorithms: Centerpoints and center lines: Speed up your design process with the Centerlines command that automatically creates centerlines. Remove centerlines, or turn off the command to reuse them. (video: 2:10 min.) Paths and meshes: Use existing objects as a path for fast, efficient drawing. Add or modify a path and adjust the output resolution. Mesh the path to create a surface that can be updated automatically. (video: 2:50 min.) Vectorize: Use new, editable control objects to vectorize paths and objects, and then edit those vectors. (video: 3:50 min.) Arrowheads and anchors: Use either the new or traditional arrowheads, set to any size and color. Choose how the arrowheads are displayed, or specify additional arrowheads and arrowheads on overlap edges. (video: 1:35 min.) Aspect: Convert an existing object to an Aspect object so that it displays with an aspect ratio. Use the new settings to set how far apart the four corner points are. (video: 1:50 min.) Extents: Use Extents to create an edge that surrounds the entire object. With Extents, you can easily create a large border or select an area to automatically create a bevel. Extents can also be used to select a graphical object (video: 2:00 min.) Cursor: See the cursor (pointing tool) when editing any object (not just lines and arcs). The new Cursor options let you set the cursor behavior for the entire drawing area, select a single object, or set the cursor as a stencil. (video: 1:55 min.) Color: Select a color in a color picker or use the default colors. Choose from over 9,000 unique color schemes. (video: 2:00 min)
