Agneepath (1990), and Ghayal (1990), noting that their antagonists became more of anÂ .For the first time, researchers and clinicians have identified at least four genes that cause rare but lethal, heart defects. A newborn baby with a tetralogy of Fallot, a complex heart defect in which there are four chambers, two valves and three connecting tubes, was analyzed. The baby had several symptoms at birth and died shortly after the first diagnosis, but doctors could use DNA sequencing to discover what caused his heart defect. This method can be used to help diagnose other babies with similar problems in the future, and the team reported that the new genes have been identified in other babies and adults with similar heart defects. Oct. 26, 2019, in the news Researchers are finding it harder than ever to treat people with fragile X syndrome. The use of drugs to treat the neurological disorder are largely ineffective, partly because little is known about how the condition affects the brain. Scientists at The Scripps Research Institute in San Diego, California, led by Stephen Furman, have developed an animal model for the disorder. In mice that were fed a diet that is deficient in choline, the female rodents displayed the hallmark features of fragile X syndrome. And in mice that received choline supplementation,

---

symptoms of fragile X were reduced. Most importantly, the female mice also produced more offspring than the controls. A follow-up study, which also took place at Scripps, revealed that mice that received the choline-rich diet were healthier than the controls. Oct. 24, 2019, in the news A high-resolution view of the brain is becoming a key part of research into Alzheimer's disease and other forms of dementia. High-resolution brain imaging techniques, including MRI (magnetic resonance imaging), PET (positron emission tomography), optogenetics and
