Pigeon Planner Portable For PC

Manage your pigeons: add, manage, and organize your pigeons very easily. The program interface is intuitive, and it helps you get the most out of your pigeons. Edit the pedigree of your pigeons by using the large pedigree tree. Display the occurrence information of your pigeons on the map. Get detailed statistics about each bird, such as body weight, age and lifespan. Pigeon Planner Portable Download With Full Crack is a useful application that was developed specifically in order to help people passionate about pigeon keeping, manage information regarding their birds more efficiently. This is the portable version of Pigeon Planner. This software utility does not require installation, meaning that you can easily copy the program files to any location on the hard drive, and even to a portable storage unit, such as a USB flash drive in order to run it from any computer that you have access to. In addition to that, the Windows registry and Start menu/screen are not going to get updated with new entries. Although the main window displays an array of options, the interface is intuitive and enables both novice and experienced users to work with Pigeon Planner, without facing difficulties. You can add an unlimited number of pigeons, along with details such as color, sex, sire and dam, band number, loft, as well as upload a picture from your HDD (JPG, BMP, PNG etc.). It is also possible to input further information pertaining to a bird's breeding status, current medication and upload media files to the database. The "Results" panel lets you add facts such as weather conditions, competition point, type, outcome and date, while the "Pedigree" one displays a genealogical tree for the sire and dam. The application can make automatic backups at user-set intervals and incorporates a small search tool, which can scan in the band numbers and names. All in all, Pigeon Planner Portable is an efficient piece of software when it comes to keeping detailed records about your pigeons. Time response is good and it uses low CPU and memory. CyberPigeon is a bit like a memo, as the name suggests, designed to keep track of the events you do on your computer. It does not require installation, and you do not need to specify a connection type, since it can run off the drive you wish to use it on. The default behaviour when you run b7e8fdf5c8

Pigeon Planner Portable [32|64bit]
