MixPEG(MPEG Audio Mixer).MP3 (MPEG Audio Layer 3) This application is composed of MPEG Audio Layer 3. You can play MP3, WAV and other audio formats with MP3 decoding by setting "MPEG Audio Decoder" as the application's setting in the "Sound Settings" menu. You can play WAV and OGG by selecting "WAV (PCM) or OGG". You can use MixPEG to mix various styles of audio, and make a customized playlist. MixPEG Features: • Fast seek-to-position function: MixPeg is the first MP3 mixing software which is able to seek in the song and decodes the file position internally. When you seek to a section of a song, MixPeg automatically starts decoding the selected section. • Intuitive UI: MixPeg's interface design is based on the philosophy that you should not have to remember any commands to use the software. All the commands you need are displayed on the screen. • Multiple songs support: MixPeg allows you to play multiple songs at the same time. However, the volume of each song is controlled individually. • Pitch control: MixPeg allows you to control the pitch when you mix multiple songs. • Mix effects: MixPeg allows you to mix two or more songs and apply various mixing effects to the audio. • Auto-stretch: When a song is too short, MixPeg will continue decoding the audio section of the song. MixPeg also offers an Auto-Stretching function. When you are mixing, you can see the estimated time remaining on the page. • MixPeg includes a tone generator function. • You can add tags to songs. • You can copy the song info of each song to clipboard automatically. • You can use MixPeg as a "music box". • You can save your set list as songs. • You can set the audio volume. • You can view and modify your song's tempo. • You can display the band when you mix. • You can view the number of track in a song. • You can save your set list as song lists. • You can use MixPeg as a "music box". • You can set your preferred master

What's New In MixPEG?

 Pitch control This is a one-knob mixer. MixPeg will play MP3 files with pitch control. The upper knobs are for the master control for pitch, and the lower ones are for mixing. There are 9 mircophone-style buttons that change the playback volume with the middle one as a mute button. Volume control When mixing is finished, you can apply the same mix just like a normal record. The volume knob is like a normal mic. CrossFade control Playback MP3 files in our "slicer" player is crossfade-able. Therefore, the music you have just finished mixing, can be played back the next time you select it. Fast Seek Play Position in MP3 MixPEG allows you to play any position in MP3s. It comes

with 9 buttons on the right side of the knobs to switch play positions. ⬚ Full-screen editing I've built this application using VISUAL C++. So you can read the whole source code with the "doxygen". This application works well with Windows 98. Description: The aim of this project was to design an application to mix music that uses a simple "one-knob" pitch control. Requirements: The application should have 2 controls, a pitch control and a volume control. The volume control should be a one-knob. The middle one is the mute one. The application should be able to crossfade. The application should be able to play any position in the MP3 file. The application should have text information windows when you press "Mute" or "CrossFade" buttons. Description: This is the component of the following project. For the whole application see "MVNC". Description: A simple MP3 Player. The whole project use DLL calls and to avoid using VNC, I use this one. Usability of this project: The interface may be a bit to simple, but it's important to work in realtime. So, most of the time you will be able to see what you're doing. Description: I made a VNC based MP3 player. The project uses two main cards: a VNC server and a client. The VNC server have the interface, and the client was a simple application with a VNC Client using a
