Overview The following is a list of all of the major AutoCAD releases since 1987, which was when AutoCAD was released as an OEM product. The first Autodesk product to use the internal numbering system was AutoCAD V6. AutoCAD 2012 or AutoCAD 2012R1 The current version of AutoCAD is released in yearly versions. 2012 AutoCAD was released in June 2012 and has the version number 2012R1. The new release has many new features, such as cloud computing, as well as several performance improvements. It also supports Windows 7 and Windows 8. Although AutoCAD has improved with every new release, 2012 AutoCAD (R1) introduces a new feature that will revolutionize the way Autodesk products are used. With the new application interface, you will be able to interact with your designs and models using your mouse. In the past, a CAD user had to keep their hands on the keyboard the entire time to make changes. Now, when you're designing or drafting, you can click and drag the work around the screen using your mouse. With the new interface, you will now be able to make changes more fluidly than ever. Uses the mathematical and string building language GEDCOM to allow generation of features, links, symbols, cross-references and layers from the AutoCAD database. In addition to being able to import from external sources such as other CAD programs and word processing documents, GEDCOM has been extended to allow for more detailed generation of CAD-based drawings, such as the ability to generate 3D drawings. A feature-based database which has a database-like structure. AutoCAD commands In AutoCAD, most commands can be applied to any open drawing file. Accessing command functionality To open the command center, on the right of the screen, click the down arrow to the right of the "Hint" button. Similarly, to view the command history, click the down arrow to the right of the "Hint" button. If you want to see the available parameters for a command, while you are in the command dialog, click the small arrow to the right of the "Edit" button. Starting a command The simplest way to start a command is to enter its name. For example, to draw a line you

enter DRAWLINE and press the Enter key. If the command has already been applied to the current drawing, you will be asked if you want to Overwrite or Append. Assigning a Command to a Command-Button If you want a command to always be available when you press a certain key, you can assign a command to it. To do this, first go to the command center by pressing the down arrow in the top-right of the screen and then click the small arrow to the right of the "Edit" button. Then in the command list, left-click on the command you want to assign to a command-button. If the command is already assigned to the command-button, you will be asked if you want to overwrite it or append it. In this example, the command "DRAWLINE" will be assigned to the command-button "Draw" on the far left. If you want to assign several commands to the same command-button, simply repeat this process for each command you want to assign. In this example, the commands "DRAWLINE", "DRAWRECTANGLE", and "DRAWTEXT" will be assigned to "Draw". Linking a command to a function
