I have managed to solve my first problem by using SetMetadataValue: MetadataSet metadata = new MetadataSet(Catalog.GetUpdatedCatalog()); MetadataStore.SetMetadataValue(metadata, "RepositoryName", "AutoRep");

Now I want to set a default value, but now I'm getting the error ArgumentException: Cannot find item for key:

RepositoryName How should I do this? A: Have you tried MetadataStore.SetMetadataValue(metadata, "RepositoryName", "AutoRep"); MetadataStore.SetMetadataValue(metadata, "RepositoryName", "DefaultRep"); I'm not sure though whether you have read over the documentation for it first. Heavy rains in Chile have killed at least 13 people and left some regions under 9 inches of water, officials said Monday, adding to a wave of misery that has dogged the South American country for months. Chile is one of the most stable economies in South America, but it has long suffered from its infrequent coastal storms known as "chubas." But more than a month of rain has created a steady, higher-than-normal level of flooding that has submerged cities, including the port city of Copiapó, where heavy rains have submerged streets. Chilean President Sebastian Pinera blamed mismanagement for the current disaster. "Aware of the possibility of such situations, we created resources and instruments to anticipate risks and build backup systems,"

Pinera said in a statement, adding that a government team was deployed to the affected areas to help people. The government has also transferred resources from a drought-stricken region to help in the recovery effort. The heavy rains on Chile's southern coast affected other parts of the country, as well. On Monday, Seville, Chile's second-largest city,

saw at least 6 inches of rain. On Sunday, the country's southernmost region of Magallanes declared a "state of emergency" due to the deluge. Seventy-four deaths have been reported in the past week in Chile. Chile is the world's No. 8 producer of copper, with
