Watch now..BACKGROUND: We conducted a randomized, double-blind trial to assess the safety and analgesic effectiveness of an epidural catheter containing one of two combinations of drug for postcesarean analgesia compared to standard epidural analgesia. METHODS: Nine hundred and ninety-seven women were randomly assigned to receive one of three treatments: bupivacaine 0.125% with epinephrine 1:200,000 combined with sufentanil 6 microg/mL; bupivacaine 0.125% alone; or saline combined with sufentanil. Treatment was started at 15 min before

delivery of the baby, and the epidural was maintained for 48 h. POPULATION: Postcesarean patients; 37.5% delivered vaginally, 35.8% delivered by cesarean section, 21.3% by vacuum extractor, and 5.8% by forceps. FINDINGS: Only 1 patient reported adverse effects (axillary or inguinal pain). Epidural supplementation with bupivacaine-sufentanil produced similar pain relief, quality of analgesia, and side effects compared to standard epidural analgesia. Ovarian follicle development, ovulation, and luteolysis are regulated by interactions between the hypothalamus and the pituitary gland via a diverse network of biologic signals. Estrogen appears to play a predominant role in the regulation of these reproductive events. The steroidogenic cells, or the cells

that synthesize these hormones, are present in both the pituitary and hypothalamus. The source of these steroidogenic cells is not established. However, it is clear that stromal cells, ependymal cells, and a few cortical neurons secrete estrogen and progesterone. The methods we have developed in the past grant period have allowed us to study one of the nuclear sites for the synthesis of these steroids, the rough endoplasmic reticulum. Microinjection of locally-derived [35S]methionine-labeled steroidogenic proteins can be readily observed in electron microscope autoradiograms. These proteins will be identified as androgen binding protein, estrogen receptor, cytosolic P450, and cytochrome P450 reductase. As well as these steroidogenic c6a93da74d
