This invention further relates to a method for

controlling an internal combustion engine. A system for starting an internal combustion engine is known from DE-OS (German Published Specification) No. 27 43 361. The control system is operated in a self-contained operating mode at one point in time and then at another point in time. In the starting operation, the starting operation of the engine is begun as soon as predetermined engine operating conditions are met. This is accomplished in the known case by operating the ignition on a voltage that has been decreased in steps (stepdown voltage), and by means of that use is made of the fact that a synchronously recurring starting process is concluded as soon as predetermined driver-related

conditions are met. The
aforementioned starting procedure is
subject to the disadvantage that
