For example, it's known as enterprise-class disaster recovery. In using this feature, the service exchanges the original disks content to another service for online storage, and then creates a new copy onsite as a backup. With Site Recovery Service, you can choose your backup media, including both internal and cloud-based services like Amazon Glacier. You can also attach any of your own storage devices to the Amazon account. This means that you can take full advantage of cloud storage services without affecting your backup infrastructure. The one downside to this feature is that you can only recover a file that is already stored in Amazon's cloud storage. Therefore, you can't recover files that have been deleted from your hard disk, for example. That doesn't make it any less useful, however, especially since it doesn't force you to purchase any storage medium. Moreover, you can also use Site Recovery Service to keep your own copies of important data. There are 2 types of storage accounts included in the service: those used for backup and those used for disaster recovery. With the former, you must have at least two copies of your files. This is a small price to pay for a service that is as powerful and easy to use as Site Recovery Service.
