Paths are at the heart of most font editing. With FontLab 8, you can convert paths to objects like bezier curves or glyph outlines. For detailed path work, the excellent new drawing commands in Path > Export as SVG and Path > Create Vector Path enable professional designers to control

curves with precision. More than ever before, you can edit any path in any drawing program and FontLab will read, edit and convert it for you. To demonstrate the font development tools in FontLab, type a line of letters from the A to W, on a new layer, and make this layer active. Next, type some more letters. Auto Generate spacing by

setting all letters to a single width using Auto Space, or Command-C (control-C on Windows). Set the Autosep property of the bottom letter to blank (Bottom). Set the Autosep property of the top letter to normal (Top). Set the Top space property to 2 points. Use Shift-Command-C to automatically set the sizes and proportionalities

of all letters. Each letter still appears with a unique width. Fontographer is an ultimate font building and editing app, once you get the hang of it, you'll be making fonts in a matter of minutes. It's got an easy and intuitive interface, combined with an award-winning technology built by Fontlab, the leader in font editing apps and fonts for

nearly two decades. The right app for everyone who wants to make a professional font is here!

Default measure: You'll have to know the difference between: Leading, Kerning and Non-breaking spaces -- These are the measures that determine the different sizes, together with the Glyph measure, which you change to match the

font youre going to use.
Fontographer
automatically adds
Leading, Base-line
Kerning and X-Height, but
you can set anything
within the Glyph
Measuring window.
