Edisonamberola30yearbyserialnumber

in the book the great gatsby, the narrator says that he was born on the same day as tom, dick and harry. this must be a mistake, since the date given in the book is may 10th, 1925. tom is born on april 16th, 1900. i therefore guessed a birth date of some time in the year 1910. i did this by examining the book's "serial number", and then finding the corresponding serial number in the online database. the result is: edisonamberola30yearbyserialnumber and the date is may 10th, 1910. this program reads a serial number from the standard input and translates it from a format suitable for printing into the format used by the edisonamberola30yearbyserialnumber program. it then prints the corresponding date. usage: edisonamberola30yearbyserialnumber [-skip serialnumber] [-y julianyear] [-d juliandate] [-w julianweekday] [date [date]] optional -skip serialnumber : number of serial numbers to skip -y julianyear : year as a julian year -d juliandate : julian date to use -w julianweekday : julian day of week to use (0-6) help this help text docker exec edisonamberola30yearbyserialnumber -skip 4 if the current year is the same as the year specified in the command, and the optional -skip option is not specified, then the serial number is skipped 4 times. if the optional -skip option is specified, then the serial number is skipped specified number of times. docker exec edisonamberola30yearbyserialnumber -skip 2 if the current year is the same as the year specified in the command, and the optional -skip option is not specified, then the serial number is skipped 2 times. if the optional -skip option is specified, then the serial number is skipped specified number of times.
