PC-DMIS is designed from the ground up to offer a more intuitive interface. PC-DMIS is more user-friendly than a traditional PC-SCQR DMM by allowing faster measurement results with fewer clicks. A more active setting for Range, Offset, Zero (Start/Home) is more user-friendly than the option in a traditional PC-SCQR DMM. PC-DMIS offers numerous advantages in terms of high-precision, faster measurement times and user friendly interface, making the system an obvious choice for quality assurance. PC-DMIS provides four major enhancements to the PC-SCQR® 2020 automation in addition to the industry-leading features included with PC-SCQR 2020 to achieve higher product quality and consistency. Now that you have some idea about the software configuration and installation, lets quickly walk through the installation process. When installing PC-DMIS on a new system, you will be using either Windows XP or Vista for the most part. If you have a system that already has PC-DMIS already installed, the PC-DMIS setup will “update” your existing configuration. For example, if you are currently using Windows 7, that update will only modify the look of the interface to more closely match the Windows 7 interface. If your PC-DMIS configuration is from an older version of PC-DMIS, you will need to start over. Here is a general flow through the installation: Easiest way to install the software is thru “Download and Install” on the websitedownload (<http://zavvi.com/pc-dmis.html?&http://www.encoretech.com/shop/fl/PC-DMIS.html>). Before this, you must have downloaded and installed SFX Asset Management. You only need to go thru your download and installation once. The first time it is installed, it will create a sample file “tcm16” on your drive. Click “Finished Setup” at the end of the installation. After this is done, go back into the sample file and look at the devices. The devices should be listed in the order the were found. You can copy the file to the server and use this as a reference, or create a new file with it (“tcm22.”). Now the software is install. You will be able to access the “sam,” “info,” and “dev” databases within the software. You can also access the databases from the menus on the PC-DMIS interface. There are no other databases installed, and no SQL installed in this version.
