FXpansion BFD v2 3.0.1.19.x64i.Standalone.Vst.RTAS.v1.0.9.x86.x64.Q: Should I have a map for each subject? I'm making a 2D scrolling action-game. One part of the game is the character moving from room to room. The rooms are all alike so I use a Map which is something like this: map[x][y] = Room map[x+1][y] = Room map[x+2][y] = Room ... (example). map will be indexed by x, y. x is the number of map entrys(because it's a two dimensional array). x = 0 represents the very start of the map. My question is, should I make a separate map for each subject(player or enemy)? Or should I keep it as one map? If I made an enemy and a player, could that enemy attack the player? And if I made it as one map, would I not have to iterate through each element to check if it is either x=0 or x=1, and not x=0 or x=1 or x=2? A: That approach will have its advantages but it will also have problems. For example, you will have to deal with updating the enemies across the map since they can be blocked from view by walls, etc. You can do this by splitting the map in areas where there's nothing to see and block all movement across the boundaries. You can also use this approach to

make them as random as you like by applying a randomization function to the map. Another problem you may encounter is that you don't have the minimap. The advantage is that you can display all the map at once and not display a single tile. The disadvantage is that you have to change the rendering of the map if you want to change a tile which you don't want to display. So if you're going for code reuse in the long term, don't do it. Menu What Is He Eating? How is your son doing with helping you pick out his food? This is usually a good time for him to learn how to tell time, using a clock to say it's lunchtime and dinner time.
