What's New in the?

JPhotoTagger is a photo manager that helps to explore and organize your photo collection. The application supports a huge number of image files and can be used to navigate and sort through pictures based on selected criteria. JPhotoTagger supports the following image types: -BMP -JPG -JPEG -PNG -TIFF Other file types such as RAW, XMP, IPTC and EXIF can also be viewed. Additionally, the application can be used to sort the images by their filename, date of creation or based on various technical characteristics such as focal length, ISO or copyright. Those who frequently use pictures may want to create albums, set folders for imported photos or set a search filter to help find the desired image. When the selected image is displayed it is possible to

view the XMP (Extensible Metadata Platform) or IPTC metadata in its original layout. The application includes an easy to use graphical interface. The main screen shows a folder tree that allows viewing the different image files. When clicking on an image it is possible to:

- Set the folder where the image will be stored.
- Display the image.
- Edit or modify the meta data of the image.
- View the image in a separate window.
