If you're editing dozens of pictures at once, Bridge's performance is kind of sluggish. But it still has a place in my workflow. If you are editing a large number of pictures that you need to work on quickly and frequently, I think Bridge is worth the trouble of having to manually merge the files back into a single document. It's the perfect tool for working on images with many layers. Once you save a project, it's set, and you can choose not to open it up in Bridge when you open a new image. Yes, you lose the previews, but it's a tradeoff to make when you're working this quickly. Using Bridge with Photoshop is a nice touch for productivity. With the iPad Pro and Apple Pencil, I really enjoy doing my sketching on the iPad, and I am not forced to hold it up to my face to do it. It makes it much easier for me to move around my sketchbook, and I can do it easily in many places without needing to carry it around, saving my back and arms. I want to compare it to the desktop version of Photoshop, but you can't open a sketch in Photoshop, only open a sketch in Photoshop Sketch. You can also have only one Sketch file at a time, while on the iPad Pro, you can open as many sketch files as you want. I want to clarify a few points: 1. Photoshop Touch is not Photoshop. Just like we don't call it Photoshop, we'd never call it Photoshop Touch. 2. We talk about Touch as it is available through Adobe CC. It does not include the new Panel features as these are never available through CC. 3. If you want to try new Panel features, check out the free trial of Photoshop Touch. The best way to determine if Touch is for you is to use a free trial and see if you like it. You can always get the full version when your free trial expires. 4. The Panel is not Photoshop Panel - that was the original description for Photoshop Touch.
