Full control of Yahoo! Instant Messenger conversation logs in a secure way Every conversation logs on your Yahoo! account contains a lot of information, including IMs, photos, chats with participants and much more. All of it could be useful for cybercriminals. An attacker could look through your logs and find all the data, or even take over your account. A hacker can abuse such information to get all the passwords, which is a dangerous situation for your account. Every time you log in to a service, you type the user and password, and your password is encrypted. A hacker can capture these details to enter another user's account. Hackers could abuse information about other users and their passwords. Yahoo! Instant Messenger conversation logs should be protected. In this case, Yahoo! Conversation Control helps you to keep your conversation logs confidential. Yahoo! Conversation Control provides the following features: \* You can create rules for each IM conversation \* Hide specific conversation logs \* Protect your conversation logs with a strong password \* Block people who haven't blocked you in the past \* Control how many times the logs are viewed \* Prevent certain times and days for viewing logs \* Backup and restore conversation logs Requirements: \* The latest version of Yahoo! Messenger for Windows. \* Internet Explorer 8 or newer. \* Internet Explorer 7 does not support this feature. How to get Yahoo! Conversation Control: \* Visit the Yahoo! website, choose the option 'Download' and select 'Conversation Control'. \* Wait for the download to complete, then install the software on your computer. \* After installation, click on the button 'Conversation Control'. \* Sign up for an account if you don't have one, and follow the instructions. You can disable this feature from your Yahoo! account. You can also use the Yahoo! Conversation Control utility for Mac and Web. \* Visit the Yahoo! website, choose the option 'Download' and select 'Conversation Control'. \* Wait for the download to complete, then install the software on your computer. \* After installation, click on the button 'Conversation Control'. \* Sign up for an account if you don't have one, and follow the instructions. You can disable this feature from your Yahoo! account. Yahoo! Conversation Control requires Internet Explorer 8 or newer.

## **What's New in the Chrome History Manager?**

Every year, countless tons of computer resources are used to maintain a Windows operating system and thousands of apps. Furthermore, quite a bit of money goes into buying new hardware to replace the devices used to run Windows-based applications. When you add up all the time and money spent on keeping Windows and its apps up-and-running, the results are staggering. Microsoft estimates that the yearly cost of managing Windows-based devices reaches more than \$100 billion. If you need an estimate of the yearly costs of a Mac computer, you can probably just look at the price of an iMac or other Mac. However, to truly understand the financial burden of an Apple desktop, you have to add up the costs of the Mac hardware and the related software used by Apple-based devices. Considering that Apple has historically favored design and quality, the overall cost of keeping a Mac running can be significantly higher than keeping a Windows desktop system running. What are the biggest costs of running a Windows desktop? The largest cost of operating a Windows desktop is likely the cost of paying for the support of the software you use. In some cases, all you need to do is download a new version of an app for free. However, in other cases, you need to call tech support or pay for support over the phone or online. In fact, Microsoft charges a flat fee of \$35 or more per month for Premier Support, which is comparable to the cost of using a Mac's Tech Support feature. Additionally, the overhead of keeping Windows computers running is growing. Microsoft estimates that it costs \$70 billion every year to keep its Windows-based systems running, not counting the cost of applications. In other words, Microsoft may not even make \$70 billion from its Windows operating system, let alone from the Windows-based apps. How much does Apple spend on computer support? Much of Apple's cost of doing business comes from AppleCare. This can range from \$129 for every \$199-\$499 Mac product, to \$149 for every \$299-\$699 Mac product, to \$199 for every \$499-\$899 Mac product. AppleCare is a one-year or three-year subscription program that gives you access to a telephone hotline or online chat service. This is in contrast to the Mac OS X operating system, which has no comparable support program. Apple estimates that the OS-related support costs are a maximum of \$300, which is comparable to the cost of Microsoft's Premier Support program. How do I get help with my Apple devices? There are several ways to call Apple's technical support. For starters, you can download the free version of Apple's iPhone and iPad

Technical Support app. Just like Microsoft, Apple charges a fee for phone support. However, to get on the phone, you need to contact Apple's technical support at least once within a one-year period. Another option is

## System Requirements:
