The top 11 tools and features for Photoshop have some special and little known truths in the timeline since they moved to creative cloud. Without further ado, here they are:

- **Rule of Thirds:** This is an important scheme that the design industry has accepted to help in organising images so that the composition of a photograph will make more sense. It's not at all new as we see it a lot in the great works of art across the centuries. It's simply arranging the edges of an image according to the golden ratio.
- **Spacing & Leading:** The tools such as leading and spacing; which also can be labeled as text measurement; are now available in the format adjustments. We can measure the size of an object such as text and then space it. This is further used in cropping images, creating typographic effects or in setting the size of objects and text. This frees our hands and the design from looking for meagre measurements. And Adobe has made it very easy to do.
- **Strokes Panel:** The revamped Strokes panel has given us many options that help us correct, retouch or replace the path of a host of components in Photoshop.
- **Batch Process:** We can now process multiple images at a time on the Pixel Perfect mode, which was recently introduced.
- **Content Aware Fill:** The Illustrator's Content Aware Fill is now available for Photoshop. This feature helps us to fill an object or text in a photo and recover the original without blurring. It also gives us the option to hide elements like layers to save time.
- **Layer Fixture:** We can now drag and drop variants of our layers into the Layer Fixture panel. These are different layout ideas that can later be edited and experimented with to create a unique design. This tool is handy if you've had some other design ideas kicking around and you don't want to muck up the idea you had. This way you can experiment with alternate designs without the pressure of ruining your original.
- **Reflection Map:** The Reflection Map has got some new and superior features. It has improved the image and lets us create various effects; or we can also get rid of unwanted reflections. The Reflection Filter can help us to achieve layer-based highlight reflections.
- **Magic Spelunkers:** These function as a toolbox that lets us select fonts, paragraphs, tables, etc. for formatting. They are also known as navigation bars. This tool is very helpful when shortening long paragraphs for ebook readers.
- **Broader images:** Photoshop now has the ability to handle broader images sized between 800 percent and 1200 percent. It's great for working with images in groups. The images are more unique and it lets us see how Photoshop will process them in terms of image editing, cropping, or effects. It shall be a useful feature when you're running a webinar.
