To start image editing and manipulation, the first thing you need to do is to open an image. If you are on a Mac, select the Open button from your keyboard's file menu. If you are on a Windows system, then choose the File menu and select Open. Then, all you need to do is to double-click on the image file for it to open and load into Photoshop. Once in Photoshop, the next thing you need to do is to click the New button from the top of the tool bar. This will allow you to create a new document. You can also load a file from your computer if you would like to open and work on a particular file. When a file is loaded, you will see that the icon for the file appears in the View menu, and in the Navigation Panel. If you are looking to create basic photo retouching elements, then you can use Photoshop Elements. There are only two steps for creating your own images. In Photoshop, you can start from scratch and use the features that may be unavailable in Elements. In Elements, you start with the automatic mode, and you can, with patience, go through all the steps in the manual mode. You can also choose to use a template image of Elements to start with, or create your own. After the basic image editing using Elements, you can use Photoshop to finish the job. Begin by making a simple selection to define the first image that you want to manipulate. After that, you can use the Selection tool to create the selection you want to work on. You can choose the Freeform tool for this, or you can choose the Rectangular Selection tool. The tool will appear when you click it and a border will be drawn around the image that you want to select. You can then use the Freeform tool to draw any shape on the image and you can drag the tool anywhere on the screen to draw it. When you drag the tool, you will see a dotted square in the image. e3d0a04c9c
